

Planned power outages

Powell River and surrounding communities

As part of the Jarvis Inlet and Agamemnon Channel Power Line Replacement Project, we're upgrading the transmission system serving approximately 10,000 customers in Powell River and surrounding communities. This work will improve public safety and electricity reliability for our customers in this area.

Some of the system upgrade work planned for this spring can only be completed when the power lines are de-energized. For the safety of our crews, we'll need to turn off power for two 12-hour periods:

Where: Powell River, Lund, Cortes Island, Texada Island, and Saltery Bay.

When: Sunday, May 24 from 8 a.m. to 8 p.m.
Sunday, June 7 from 8 a.m. to 8 p.m.

Our crews will also complete system maintenance during these outages to help maintain safe and reliable power and to prevent potential unplanned emergency outages in the future.

We realize that there's never a good time to have a power outage and thank you for your patience and support while we complete this critical work.
